Title of Group Report

List of Group Member Names

Fall 2026

Abstract

This is a working example of the article documentclass in LaTeX. The **abstract** environment is used to create an *abstract* for your document. These placeholder contents are just examples of common formatting commands and should not be retained for your submitted reports.

1 Sections and Subsections

Some text. First paragraph stuff.

Leave a blank space between paragraphs for correct formatting. We can also add subsections, subsubsections, etc. using the proper declarations.

1.1 Subsection 1

Some text here.

1.2 Subsection 2

Some different text there.

1.2.1 Subsubsection 1

You probably won't need subsubsections for this report, but you can use them.

2 Lists

Here are examples of two types of list you might want to use. The first is an itemized list:

- These
- Points
- Are
- Distinct

You can also make a numbered list using the enumerate environment wrapper:

1. So
2. Are
3. These
4. Points

3 Figures

You can use the figure environment to add images to papers and presentations. Your usual image file types are mostly supported. Here's an example:

Figure 1: A cat.

4 Tables

Tables can be useful for scientific documents, displaying data points, making comparisons, etc...

1	2	3
One	Two	Three

Table 1: This is a table.

You can also use the label command on tables and figures to reference them automatically, as seen in Table 1.

5 Citations

You *might* need to reference an external source of information to use in your document without plagiarizing [1]. Information from the course textbook, lectures slides, or your selected media topic does not need to be cited in your group's report.
